User organisation units

Main

Below

2 x below

Remember to select the organisation unit level containing the facilities.

The layer is edited and the org unit is changed to Njandama, map is saved (File -> Save).

Navigate to another app in DHIS2 then come back to Maps and open my 'Chris-R test map1' map, the org unit hasn't changed, it's still 'Ngelehun':

The screenshot displays the DHIS2 Maps interface. The browser address bar shows the URL `play.dhis2.org/2.31.8/dhis-web-maps/index.html`. The page title is "DHIS 2 Demo - Sierra Leone - Maps". The interface includes a top navigation bar with a "CR" user profile, a message icon with a "43" notification, and a "Interpretations" link. Below the navigation bar, there are "Add layer", "File", and "Download" options. The main map area shows a map titled "Chris-R test map1" with a red circle highlighting a facility labeled "Ngelehun CHC". On the left side, there is a "Facilities" panel with icons for CHP, CHC, MCHP, Clinic, and Hospital. Below that is a "Basemap" panel with options for "OSM Light", "OSM Detailed", "Google Streets", "Google Hybrid", and "External basemap".
