Feedback from DHIS2 CoP members

I have gotten a lot of help from this DHIS2 CoP. This place was actually a life saver for me. When I had a problem regarding DHIS2, the “search icon” worked like magic for me. Thanks to the people and organizations who worked behind it, participated in discussion and shared their knowledge, and are working continuously to make it better and improved.

I was not a fan of the switch from email to this format at first, but now I love it. Much easier to find previously posted threads relevant to my questions. I basically just keep the CoP home page open on my computer.

The CoP platform has significantly boosted the interaction between the entire DHIS2 family. The engagements and information in the DHIS2 CoP are more transparent and easily retrievable. I find it easy to browse and understand issues and thoughts from DHIS2 stakeholders from all around the world. You rarely come across redundant questions or discussions because of the platform’s intuitive search and categorization features.

DHIS2 is an open source, free software to collect, manage and analyze information in developing countries.

2.28 billion people live in countries where DHIS2 is used. With the inclusion of NGO-based programs, DHIS2 is in use in more than 100 countries.

These donors support a global network of DHIS2 experts as well as the development of a stable, generic platform.

DHIS2 is governed by the University of Oslo.

Let’s build a vibrant DHIS2 community.

https://community.dhis2.org
The DHIS2 Community of Practice (CoP) was established to be the “one-stop shop” for everything DHIS2. It is a single platform for community members to interact and engage with each other, a place for members to initiate discussions, ask questions, get support, provide solutions for each other, and share user stories.

4 core pillars of the CoP:

- **SHARE**
- **LEARN**
- **SUPPORT**
- **CONNECT**

Community members share experiences and challenges, offer solutions, and feel confident asking questions and reaching out for support.

### Enrollment

Enrollment trends for the CoP are on the increase since the launch in November 2018.

As of June 2019, there are more than 2,300 members of the CoP.

### Community engagement

CoP members engage with each other on a variety of topics like Implementation, Support, Development, Capacity Building, Resources, etc. Community engagement is part of the larger DHIS2 software development and implementation process. The community contributes with best practices and implementation issues which feed into implementation guides, documentation and even possibly into WHO modules.

### During an average month:

- **100+** New members join the community
- **1000+** New posts are published

#### What is the DHIS2 Community of Practice for?

- Discuss your DHIS2 experiences
- Ask questions and get support
- Comment on DHIS2 roadmaps
- Give feedback
- Make connections with others
- Get news on upcoming events

The DHIS2 community brings together people from all around the world, each with their own DHIS2 experience.

- Governments
- NGOs
- Experts
- Researchers
- HISP Network
- Private companies
- International organizations
